

SCHOOL LIFE

A WEEK OF MOVEMENT AND SPORT in ALECO KONSTANTINOV SCHOOL

The week of September 29 to October 3 was devoted to physical activity and sport. A week full of possibilities to discover the benefits of an active lifestyle, to enjoy the movement and recharge.

Move Week is a campaign supported by the European Council ,Foundation of Coca-Cola, the European Federation of cyclists and many other partners. It aims to motivate 100000000 Europeans to become physically active by 2020.

Our school participates in the campaign as a local partner called MOVE Agent - and organizes sporting events at the local level, involving all its students.

Within a week in the school "Aleko Konstantinov" children enjoyed the open classes in yoga, functional training, Latino, dance and tourism. Probably everyone was able to find something suitable to unload and find it out as a future hobby.

## CLUB "Mathematics for Everybody"

In some people the mathematical abilities occur at a very early age. Typical example is Gauss and Pascal .There are children with developed mathematical thinking now too

Club "Mathematics for All" this year combines two groups of seventh graders.

They will be able to get out of the framework of compulsory education content and to ensure that mathematics could be useful and entertaining. For students it will be interesting to consider from another angle some topics taught in regular classes.

The purpose of our club is awareness of the role of mathematics in the modern world; reaching knowledge in mathematics to the extent that meets the needs of modern constructive thinking and active person. Students will apply their fundamental Mathematics in custom tasks and situations.

Training at the club plans:

- broadening and deepening of knowledge and solve a large number of tasks and tests;
- establishing a lasting interest in mathematics and its applications through mathematical modeling of processes in different areas;
- develop logical thinking and imagination by solving logic problems
- education of hard work, persistence, flexibility of thinking;
- preparation for matriculation and entrance exams

Head of the club: Rila Adzhelarova

## MY FAVOURITE BOOK

Of the books I read this summer most interesting for me was "Tales of Nations". In it I found very funny and instructive stories. I especially liked "Nasreddin Hodja and the Frenchman".

Once a guest of the Sultan came to a Frenchman. He said he would accept Islam if anyone decipher his words. Then the Sultan called Nasreddin Hodja and ordered him to see what the foreigner meant. Once they met, the Frenchman drew by hand a circle on the floor. Nasreddin Hodja divided the circle into two equal parts, and the other man made wave move up the circle. This time Nasreddin Hodja made a movement seemed to sprinkle something, after which the guest pulled out an egg and Nasreddin Hodja - a lump of cheese.

After all this, the Frenchman was very pleased and told the Sultan that he had been understood. He explained that first he drew a circle, a symbol of the Earth, NasradinHodja divided in two to show that there are oceans and land. With the upward movement he wanted to show that plants grow on the land s, and the other added that without rain they can not grow. The egg was for the shape of the Earth and subtracting the cheese, companion showed him that there is snow.

Nasreddin Hodja`s interpretation was quite another. That morning he had not had breakfast and he understood all this in the following way: The circle was a loaf of bread and it was divided in two for both them to eat. With the movement of the hand theFrenchman had shown that it is warm, Nasreddin Hodja sprinkled it as if it has flavor.

Then the Frenchman pulled the egg to say that it will be eaten with omelette, the other answered him:,,With whatever there is".

Hence the saying:,,They understood each other as Nasreddin Hodja and the Frenchman".

Really fun. i'll remember it and I'll try not to fall into a similar situation.

Ognjan Vikiev, 5b class
