

The "Success" Project-Club "Natural miracles"

Hello, friends!

On 21st January was held the first representative event of our club "Natural miracles".

We, the participants were so excited because we presented to our guests and friends our club activities. In "A Tale of flowers" we said what we learned about nature. We explained and told stories about air, water and light.

We were especially proud of presenting autumn session-the planting. It showed love and care to the plants sown in the school gardens. Interesting for all attendees were our toys made of recycled materials.

It is interesting and fun in our club!

SCHOOL FOR PARENTS

Playing-How useful is for kids?

The game may seem just as entertainment, but as children play, they develop basic skills and prepare their mind for the challenges of life. Experts in child development found that unfortunately the free time for children to play reduced in the last thirty years.

These are five useful effects of the game, proven by research:

1. Better behavior

Children behave better when they are able to play. If we suppress their need, they are often get nervous and even aggressive To punish children as they are taken away from break can lead to problems in behavior.

2. Partners in a team

Free game helps children and preschoolers to develop understanding of the feelings of others. When they play together, children are taught to control their own emotions, a skill that is useful for advancement in life later.

3. Move for Health

Climbing trees game and even dressing dolls requires much more movement than video games. American Association for the heart problems related events recommended that children aged 2 years should do physical activity at least one hour per day. Active children become active adults. That reduces the risk of diseases of the heart and other harmful effects of sedentary lifestyle.

4. Better success in school

The endless hours in the classroom are not the best way to improve school success and gain knowledge. While the children run and jump, they continue to communicate - for example, tell stories and develop their language skills, number and calculated results and develop mathematical concepts and etc.

5. Enjoyment of the game

Participation in organized games gives children more confidence, they develop group identity, learn to work in a team and develop team thinking. If the game is racing, children learn to compete and strive to better performance.

ECOLOGY

To save the air in our town clean

Air pollution is a risk to human health in very large modern cities. Each city is struggling with a different types of pollution as the pollutants are affected by a number of factors - natural and anthropogenic. Generally they are characterized by a higher temperature and lower humidity , and also with a particular distribution of contaminants - the cities are as heat islands and this leads to decrease-because there isn't dispersion of pollutants by the winds .

Recommendations:

Step № 1 Use eco warmth of nature!

Step № 2 Use alternative modes of movement!

Step № 3 Save energy!

Step № 4 Walk - move!

Step № 5 Keep the green wealth of the city!

Step № 6 Feel the nature!

Step № 7 Use paper on the both sides of a sheet!

Step № 8 Spread the idea!
